PROFESSIONAL SUMMARY

I work as a forward deployed engineer. I sit with the client, learn how the business runs, and build the full-stack solution through delivery. I build with Claude Code: I own the architecture, data model, security and business logic, and I verify every release. Working this way I have built multi-tenant platforms for property management, private security, nutrition clinics, engineering projects and hiring, on Next.js and Supabase/PostgreSQL, with AI features, online payments and geolocation. Three of them are live.

Before software, I spent more than 20 years managing telecom, electronic security and datacenter projects and leading teams of more than 40 people, so I understand the business side and I know how to get a project across the finish line. I build in phases, each phase closes with security, architecture and business-logic audits run with AI agents, and nothing reaches production without automated tests and a check against the real database.

SKILLS

- **AI-assisted development:** Claude Code, MCP (Model Context Protocol), phased delivery, agent-based security, architecture and business-logic audits, automated testing, verification against the production database
- **Architecture and data:** multi-tenant architecture, PostgreSQL data modeling, Row Level Security (RLS), atomic database functions for critical logic, role-based access control
- **Stack:** Next.js, React, TypeScript, Supabase, PostgreSQL, Python (FastAPI, PyMuPDF), REST APIs, Tailwind CSS, PWA, Capacitor
- **AI in product:** LLM API integration (Claude, Gemini), AI vision, human-in-the-loop workflows, read-only AI access to customer data
- **Deployment and operations:** Vercel, Railway, Sentry, Git, GitHub, error monitoring
- **Integrations:** payment gateways (Yappy), Odoo ERP, QR codes, real-time GPS tracking, PDF exports and tax reports
- **Management:** Scrum, PMI practices, Jira, MS Project, requirements gathering, process mapping, risk analysis

WORK EXPERIENCE

Forward Deployed Engineer and Founder — Nexera

2025 – Present

Full-stack solutions for operations-heavy businesses · Panama · Remote

- Start every engagement on site with the client: interview the people who run the operation, map the real process and the spreadsheets behind it, and turn that into scope, data model and a phased delivery plan.
- Build the full-stack solution with Claude Code (Next.js, Supabase/PostgreSQL, Python services) and own it through delivery: deployment, user training, support and the next round of changes.
- **Results:** a security-company payroll calculated from QR/GPS check-ins that matches the Excel it replaced to the cent; building fees paid through Yappy that post to each resident's account automatically; a nutrition platform with 696 automated tests.
- Multi-tenant architecture with Row Level Security and critical logic (payments, accounting, payroll) in atomic database functions. Claude for reports and analytics on the client's data, read-only, with a person approving every output. Vercel, Railway, Sentry.

Project Manager / Technical Coordinator

2024 – Present

Engineering, telecommunications and special systems company · Panama

- Manage regional datacenter and telecom infrastructure projects: scope, schedule, costs, vendors and client communication.
- On my own initiative, designed and built with AI-assisted development an operations platform (React + Supabase) that replaced Excel tracking: cost estimation, AI analysis of tender documents, Gantt, S-curve, inventory and Odoo integration. This result led to my role managing regional datacenter projects.
- Coordinated turnkey airport weather system (AWOS) projects at four airports in Peru and datacenter installations in the Caribbean.

- Prepare technical and commercial proposals, analyze tenders and manage manufacturer partnerships.

Founder and General Manager — Proytel 08/2006 – 09/2023

Telecommunications and electronic security company · Panama

- Founded the company with USD 500 and grew it to more than USD 2.5 million in revenue in 2019, with more than 40 employees.
- As general manager, implemented the company's ISO 9001 quality management system and took it through certification: process design and documentation, internal audits and a successful certification audit.
- Delivered more than 300 projects in structured cabling, IP video surveillance, access control, fire alarms and telephony, managing scope, schedule, budget, quality and risk.
- **Notable projects:** Machetazo Villa Lucre, Soho Mall, Bodega Conway, El Titán Federal Mall, Halliburton Costa del Este, Suvlas restaurant chain, Minimed clinic chain, Ciudad de la Salud COVID hospital, Tocumen Airport T1 and JCDecaux Costa del Este, among others.

SELECTED PROJECTS

Modus PM — AI-powered engineering project management

Technologies: Next.js · TypeScript · Supabase · Python · FastAPI · PyMuPDF · AI vision

- Schedule, costs, progress, CRM and health and safety (HSE) in one platform.
- **Blueprint takeoff engine:** the user uploads a PDF and a Python engine (FastAPI + PyMuPDF) counts elements by combining vector geometry with AI vision.
- Reads the drawing legend first, asks a person to confirm it before counting, and learns from every correction (human-in-the-loop).

tino — AI recruiting and candidate screening (live: contratacontino.com)

Technologies: React · Vite (PWA) · Tailwind · Supabase/PostgreSQL · RLS · Vercel Functions · Claude API · Resend

- Claude turns a 10-question requisition into the job profile, the posting and weighted criteria; then reads each application from a public portal and scores it in under two minutes, with a reproducible match % from the vacancy weights.
- **Bias guardrails in code:** never rejects a candidate on its own and ignores age, sex, nationality, religion and photo; consent under Panama Law 81 and automatic two-year data retention.

NexGuard360 — ERP for private security companies (in production)

Technologies: Next.js · React · TypeScript · Supabase · GPS · QR · AI

- Shift check-in by QR and GPS, real-time post monitoring and firearm custody tracking.
- Fleet management with GPS, payroll, and AI for report writing and operational analytics.

Atrio — SaaS for residential building management

Technologies: Next.js · React · TypeScript · Supabase/PostgreSQL · RLS · AI

- Multi-tenant portals for management and residents; automated double-entry accounting with tax exports, payroll and legally compliant assembly voting.
- QR access control and an AI assistant that drafts announcements and answers questions about building data with read-only access.

NutriSoft — SaaS for nutrition clinics (used by a clinic in Panama)

Technologies: Next.js · React Native (Expo) · TypeScript · Supabase · Yappy

- Clinic portal, patient mobile app in React Native and website with online booking and Yappy payments.
- Deterministic nutrition engine for reproducible meal plans and calculations.

IS Control — Internal operations suite (in production)

Technologies: React · TypeScript · Supabase · multi-tenant

- Petty cash, bank reconciliation, warehouse, fleet workshop, CRM and a multi-tenant portal to sell modules per customer.

EDUCATION, CERTIFICATIONS AND LANGUAGES

- Anthropic Claude Partner Network (in progress, 2026): Claude Certified Developer, Associate and Architect – Foundations, and Claude Certified Architect – Professional tracks
- ISO 9001 Internal Auditor — SGS
- Microsoft Certified Systems Engineer (MCSE); CompTIA A+ and Network+ — 2003-2005
- **Manufacturer certifications:** Bosch, Honeywell, Hikvision, Panduit and Nexxt Solutions
- **Languages:** Spanish (native); English (intermediate spoken, advanced technical reading)
